

Visiting a turbine you helped create is a truly wonderful experience.

Cascade Community Wind Company (CCWC) is a team of wind energy professionals who know that wind is one of the cleanest ways we can get our electricity. Community wind is a mode of developing wind power that maximizes the local social benefits of wind power including jobs, self sufficiency, and farm preservation. Already Minnesota, Iowa, Ontario, and much of Europe, have succeeded in bringing the benefits of wind directly into the hands of their citizens. Our team has dedicated their skills to helping bring the promise of community wind power to Washington State.

CCWC builds and operates commercial wind turbines in partnership with land owners in windy spots. Homes and business in the State can then get their power from these turbines, saving money doing the right thing.

With your participation in creating authentic energy solutions at a community level, we will help to reduce our nation's dependence on foreign and unsustainable sources of energy.

**TURBINE SUBSCRIPTIONS AND
RENEWABLE ENERGY CREDITS**

Subscribing to Your Turbine

Cascade Community Wind Company is offering you an opportunity to receive your power from a wind turbine of your choosing. We invite you to purchase a subscription to the output of one of our existing or planned wind turbines.

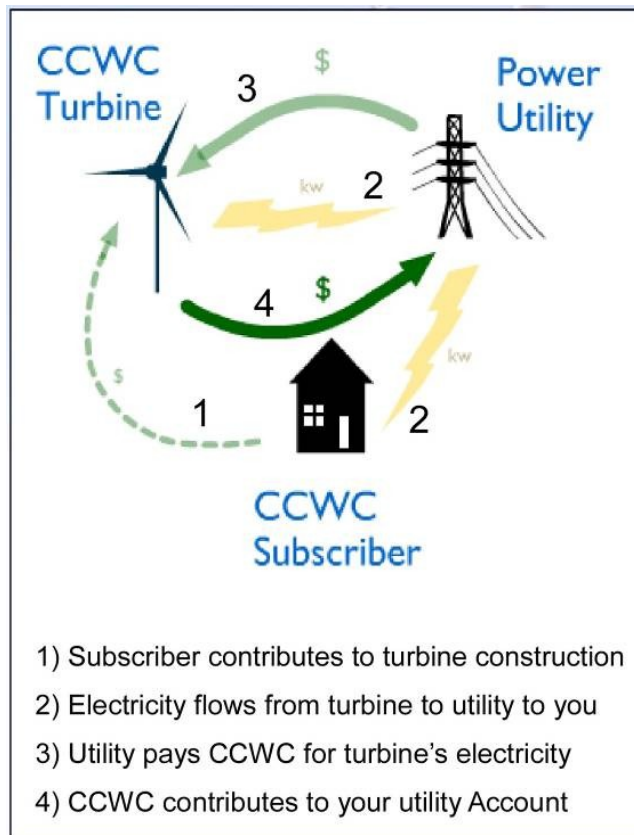

Subscriptions are a great way to get green power. They create savings, not an extra expense like utility green power, and they cost a lot less than solar PV or a small wind system at your building.

Ground breaking ceremony with neighbors, owners, subscribers, lenders and politicians in attendance

How it Works

Wind energy makes sense. We install great wind turbines in windy locations. You buy a subscription to that turbine by paying an upfront fee equal to 1% of its cost. For the next 20 years you receive 1% of what the turbine is paid for its power as a credit to your power bill. This is easier than running a wire to your house, with a similar effect: when the wind blows you save money.

What are RECs?

Renewable Energy Credits (RECs) are how the beneficial attributes of renewable energy, such as reducing pollution and greenhouse gases and increasing national security and energy independence are tracked, and are proportional to the energy produced. Full subscriptions come with the RECs as well as the savings on your power bill.

Be Powered by Our Turbine Even if You Don't Pay the Power Bill

Get just the RECs from our turbines in three ways:

- Buy a REC-only subscription for 1/4 the price of a full subscription, or:
- Pay for your REC-only subscription in annual payments, or:
- Green your event by buying a fixed number of RECs.
